

Vision Statement

Arngren.net will transform from a chaotic, overwhelming e-commerce experience into Norway's premier destination for hobby enthusiasts, DIY innovators, and tech-savvy families. My vision is to create an intuitive, mobile-first platform where passionate makers like Lars can quickly discover specialized products from electric vehicles to robotics, from solar solutions to RC aircraft supported by comprehensive specifications, expert knowledge, and a thriving community of fellow enthusiasts.

User Scenario:

User:

UX Persona

Lars Andersen

AGE	38
EDUCATION	Masters in Engineering
STATUS	Married
OCCUPATION	Civil Engineer
LOCATION	Bergen, Norway
TECH LITERATE	High

Bio

Lars lives in Bergen, Norway with his wife Ingrid (35, teacher) and two children Emma (8) and Oskar (5). As a senior civil engineer at Multiconsult, he approaches DIY projects with the same precision he applies to infrastructure design. He values self-reliance and quality over cost, spending weekends working on home automation, solar installations, and woodworking projects in his garage workshop.

Core needs

- Quick product discovery (under 3 minutes)
- Detailed technical specifications and compatibility info
- Visual demonstrations and installation videos
- Mobile-optimized browsing and checkout
- Verified customer reviews from Norwegian users
- Transparent pricing with no hidden fees

Frustrations

- Chaotic website wastes 15+ minutes searching
- Unprofessional design creates trust concerns
- Completely unusable mobile experience
- Missing critical product specifications
- No search function or product filters
- Unclear shipping costs and delivery times

Personality

Introvert Thinker
Spender Tech-savvy
Quality-Focused

Payment medium

Digital Payment

Platform

Website Mobile App

I'm an engineer I need specifications, not sales pitches. My time is more valuable than saving €20 on a website that wastes 30 minutes.

UX Persona

Lars Andersen, a 38-year-old civil engineer from Bergen, wakes up excited on a crisp Sunday morning in October. He has finally cleared his entire weekend to tackle a project he's been planning for three months: building an automated solar-powered lighting system for his backyard

workshop. His wife Ingrid and kids are visiting her parents, giving him uninterrupted time to work.

At 8:00 AM, Lars sits down with his morning coffee, ready to order the final components he needs: a specific 48V solar panel controller, weatherproof LED strips rated for Norwegian climate, and a programmable timer. His colleague Jonas mentioned that Arngren.net carries specialized electronics not available at mainstream retailers like Elkjøp or Komplett. "They have everything," Jonas had said.

Lars types "arngren.net" into his browser. The page loads... and then explodes into visual chaos. Flashing GIFs, Christmas decorations (it's October!), scattered product images of everything from electric ATVs to Star Wars robots, and what appears to be dozens of product links with no discernible organization assault his screen.

"Where do I even start?" Lars mutters, squinting at the overwhelming display.

He tries scrolling. There's no clear category for "solar panels" or "electrical components." He sees a lawn mower image, then an RC helicopter, then somehow a photo of someone's cabin. Products are positioned randomly across the page with no logic or grouping.

Lars presses Ctrl+F and searches for "solar." The browser finds the word mentioned 47 times on the single page, scattered randomly among hundreds of other products. He clicks on several, but they're not the right components. There's no way to filter by specifications, voltage, or compatibility.

Fifteen minutes pass. Lars's coffee is getting cold. His planned 30-minute research session has already consumed half his time, and he hasn't even found the products yet, let alone compared options or read reviews.

He tries his phone, thinking maybe the mobile site is better organized. It's worse the chaotic desktop layout is simply crammed onto a small screen, making it virtually impossible to navigate.

Twenty minutes in, Lars gives up. "I don't have time for this treasure hunt," he says to himself, closing the tab in frustration. He navigates to Amazon Germany instead. Yes, the shipping will take longer. Yes, it will cost more. But at least he can actually find what he needs.

That afternoon, Lars's weekend project is postponed to next month when the international orders finally arrive. On Monday, during lunch with his engineering team, he recounts his experience:

"Arngren.net is like trying to find a specific bolt in someone's garage after they dumped every toolbox onto the floor. The stuff is probably there, but life's too short."

Three colleagues nod they've had similar experiences. Two others make mental notes to avoid the site. The negative word-of-mouth reaches 20+ potential customers through casual conversations over the next week.
